The hotel management system aims to maintain and manage the various hotel tasks and processes. It is primarily responsible for hotel management in the database's core section. This also gives information on the hotel and their current availability status. In fact, guests can come to the website and register with the system by providing the required information. Each registered guest can request unit reservations. Then the guests were given information about the availability of the units according to their request.

The application also enables the admin to operate the entire system from a single online interface. This gives the admin more power and flexibility. In addition to this, the system covers room booking, staff management, and other hotel management services.

Furthermore, the users can use the system to advertise available rooms. The customers may see and reserve rooms from the comfort of their own homes too. Then the admin has the authority to approve or reject a customer's booking request. As a result, the system is used by both consumers and admin to control hotel activities on the go. The Project HOTEL MANAGEMENT SYSTEM is a web based application that allows the hotel manager to handle all hotel activities online. Interactive GUI and the ability to manage various hotel bookings and rooms make this system very flexible and convenient.

This application gives him the power and flexibility to manage the entire system from a single online system. Hotel Management project provides room booking, staff management and other necessary hotel management features. The system allows the manager to post available rooms in the system. Customers can view and book room online. Admin has the power of either approving or disapproving the customer's booking request. Other hotel services can also be viewed by the customers and can book them too.
